

MBS Energy

Model: **JB-65**

525,600 MWh of Annual zero emission electricity
(624,150 MWh maximum)

JB-65 Power Plant

The JB-65 Power Plant uses patented technologies and proven components by using the power of the sun, wind, and the magnetic power of the Earth to provide clean, emission free electricity 24/7/365. Each generator produces 525.6 MWh / yr of continuous, reliable electricity which can also be configured to create large-scaled substations of distributed power.

**Ratings Range: (per Marathon Generator Specifications)
Either 50 or 60 Hz**

| | | | |
|-----------|-----|--------|-----|
| Prime: kW | 60 | Amps: | 240 |
| kVA | 480 | Volts: | 480 |

Standard Features

- Solar Panels are included with the JB-65 Power Plant System
- Each JB-65 is operates in its own container
- The container can be intertied with other JB-65s
- 60 kW output
- 40 Sq Ft Footprint

JB-65

525,600 kWh Annually

Manufacturer's Warranty

When you include an annual service and monitoring contract with your JB-65, manufacturer warrants the JB-65 will operate within the stated parameters for a minimum period of Ten (10) years from the date of final commissioning. Operational expense is less than \$0.01 kWh.
